

Integrating the EasyCODE Editor into Micro Focus Net Express

Requirements:

EasyCODE V7.1.0.8 for COBOL or higher and Net Express 4.0 must be installed. There is no special action required during the set up process.

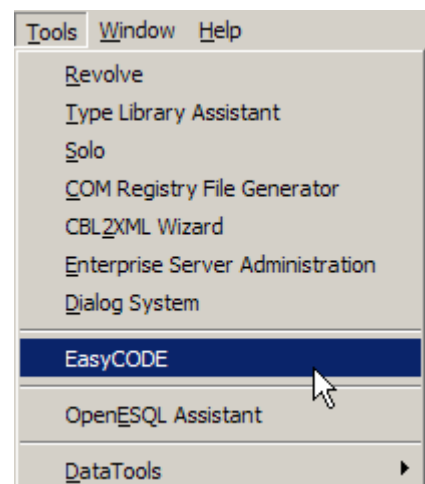

Configuration:

Run Net Express and go to „Options\Customize IDE“. Select the „Tools“ tab and click the „New Tool“ button. Enter EasyCODE or set a unique name.

Enter the Command line to your EasyCODE.exe and select your required arguments from the Arguments-Tab or enter your needed arguments manually. The screenshot above shows the arguments to send the file and current line to EasyCODE.

Once you have confirmed the settings, you have created a new item in the Tools-Menu and EasyCODE is ready to use.

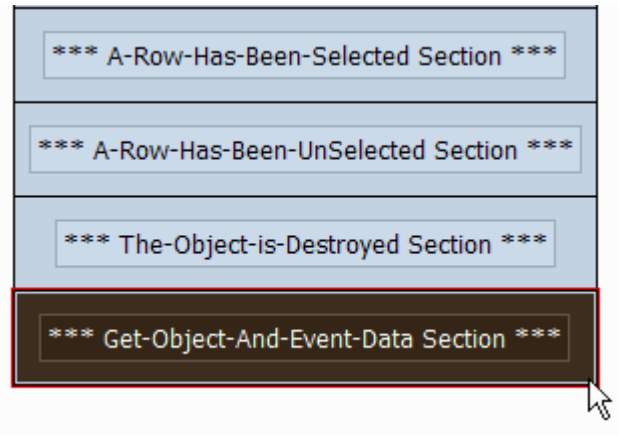

How to use:

If you have set up the integration with the values shown above, you can run EasyCODE from the tools menu. Clicking on EasyCODE will start the Editor, load the current active file into EasyCODE and positioning on the current line.

```
Get-Object-And-Event-Data Section ***
-----
Object-And-Event-Data SECTION.

Get an Object reference for the control th
INVOKE anEvent "GetObject" RETURNING anOLE

Identify the window instance for this cont
INVOKE anOLEControlSite "getAncestor" RETU
INVOKE anOLEControlSite "getOLEDocument"
```

This enables you to analyze files using EasyCODEs structured chart method, using the quick navigation in Sections or Performs and modify the file using graphical elements. Or the drag and drop programming options from EasyCODE.

Switching back to Net Express, Net Express recognizes modifications made in EasyCODE and asks for confirmation to overtake or discard changes, when a file has been saved in EasyCODE.

Please contact our EasyCODE Support team for any further questions on EasyCODE or if you have problems using this integrations. Please contact Micro Focus for any questions on Net Express.
